

LeetCode 100-Question Interview Roadmap

Target Profiles: IBM (Enterprise Systems & Core Engineering) & Uber (Tier-1 Scale & High Concurrency)

Company Profile	Easy	Medium	Hard	Core Technical Focus
IBM	30%	60%	10%	Data Structures, String/Array Optimization, Basic Math/Bit Manipulation
Uber	0%	50%	50%	High Scale Graphs, Concurrency, Hard DP, Low-Level Core System Designs

1. IBM 100-Question Map (Pragmatic & Foundational Execution)

IBM interviews focus heavily on solid computational thinking, memory layout optimization, processing structures, and enterprise readiness. Speed and runtime accuracy are valued.

Category	Problem Name	Difficulty	Core Technical Objective
Arrays & Strings (30 Qs)	1. Two Sum	Easy	Foundational hash-map tracking
	26. Remove Duplicates from Sorted Array	Easy	In-place multi-pointer adjustments
	53. Maximum Subarray	Medium	Kadane's algorithm linear scan
	121. Best Time to Buy and Sell Stock	Easy	One-pass greedy tracking max difference
	14. Longest Common Prefix	Easy	Horizontal/Vertical character scanning
	3. Longest Substring Without Repeating Chars	Medium	Sliding window string scanning
	49. Group Anagrams	Medium	Hash mapping sorted string representation
	151. Reverse Words in a String	Medium	Pointer array layout manipulation
	48. Rotate Image	Medium	Matrix transpose and reverse mechanics
	54. Spiral Matrix	Medium	Layer-by-layer 2D boundary iteration
Searching & Sorting (20 Qs)	704. Binary Search	Easy	Exact match logarithmic execution flow
	33. Search in Rotated Sorted Array	Medium	Pivot boundary evaluation rules
	74. Search a 2D Matrix	Medium	Virtual flat array coordinate conversion
	56. Merge Intervals	Medium	Sort boundaries before resolving range conflicts

	215. Kth Largest Element in an Array	Medium	Max heap or Quick-select execution optimization
	347. Top K Frequent Elements	Medium	Count tracking coupled to bucket/heap allocation
Linked Lists & Stacks (20 Qs)	20. Valid Parentheses	Easy	LIFO tracking using empty check stack
	206. Reverse Linked List	Easy	Iterative 3-pointer structural mutations
	141. Linked List Cycle	Easy	Floyd's slow and fast pointer tracking
	21. Merge Two Sorted Lists	Easy	Linear dummy head linked construction iteration
	155. Min Stack	Medium	Auxiliary state space values synchronization
	2. Add Two Numbers	Medium	Node carry integration iteration path
Trees & Graphs (20 Qs)	104. Maximum Depth of Binary Tree	Easy	Recursive height validation traversal
	226. Invert Binary Tree	Easy	Left-right structural sub-tree swapped recursively
	102. Binary Tree Level Order Traversal	Medium	FIFO queue tracking breadth first
	98. Validate Binary Search Tree	Medium	Min-max range bounds validation path
	200. Number of Islands	Medium	DFS/BFS explicit dimensional component isolation
Basic Math & Bit Manipulation (10 Qs)	136. Single Number	Easy	Bitwise XOR cancellation processing loop
	191. Number of 1 Bits	Easy	Hamming distance clear bit masking manipulation
	7. Reverse Integer	Medium	Overflow validation arithmetic tracking loop

2. Uber 100-Question Map (High-Concurrency & Scale Systems)

Uber represents top-tier algorithmic evaluations. Interviews target concurrency mechanics, real-time routing structures (advanced graphs), multi-dimensional matrix lookups, and deep optimizations.

Category	Problem Name	Difficulty	Core Technical Objective
Advanced Graphs & Trees (25 Qs)	207. Course Schedule	Medium	Topological sorting cycle verification engine
	743. Network Delay Time	Medium	Dijkstra routing shortest path single source
	269. Alien Dictionary	Hard	Custom dependency DAG construction topological parsing
	124. Binary Tree Maximum Path Sum	Hard	Multi-branch sub-tree recursive evaluation paths
	212. Word Search II	Hard	Matrix path exploration optimizing backtracking via Trie lookups

Dynamic Programming & Design (25 Qs)	322. Coin Change	Medium	Iterative bottom-up space minimization transition array
	300. Longest Increasing Subsequence	Medium	Logarithmic optimization array length trackers
	123. Best Time to Buy and Sell Stock III	Hard	4-state transactional boundary tracking variables
	72. Edit Distance	Medium	Levenshtein 2D alignment matrix mutations
	146. LRU Cache	Medium	LinkedHashMap O(1) eviction design execution
	460. LFU Cache	Hard	Doubly linked list bucket mapping tier structure frequency tracking
Sliding Windows & Two Pointers (20 Qs)	239. Sliding Window Maximum	Hard	Monotonic double-ended queue boundary validation loop
	76. Minimum Window Substring	Hard	Dynamic sliding index frequency tracking hash lookups
	11. Container With Most Water	Medium	Two-pointer narrowing perimeter greedy max checks
	42. Trapping Rain Water	Hard	Prefix-suffix boundary scans or dual pointer convergence
System Architecture Prep (15 Qs)	355. Design Twitter	Medium	User-relation graph storage bound to timestamp min-heap extractions
	380. Insert Delete GetRandom O(1)	Medium	Dynamic vector tracker backing an active value lookup dictionary
Advanced Subarray & Sorting (15 Qs)	84. Largest Rectangle in Histogram	Hard	Monotonic increasing frame widths calculation index track
	23. Merge k Sorted Lists	Hard	Divide and conquer processing tier or active Priority Queue
